## APM765 Panel Meter

### Description

The APM765 displays data collected from process current, DC voltage and temperature inputs. Several output options convert the display into a transmitter with proportional 4-20mA output or a serial communication interface. A relay output option adds limit alarm and pump control capabilities.

Process inputs can be scaled with or without applying an input for virtually any engineering units. Temperature inputs can be programmed to display in degrees Fahrenheit or Celsius.

### Inputs

4-20mA DC,  $\pm 20$ mA DC,  $\pm 10$ V DC,  
Type J, K, T, E thermocouples,  
100 ohm platinum RTDs

### Outputs (optional)

4-20mA (sink/source)  
Dual SPDT (Form C) 3A relays  
RS-232, RS-422/485 serial communication

### Power Requirements

Standard unit: 85-265V AC or 90-265V DC  
Optional: 12-24V AC or 12-36V DC

### Operating Temperature

0 to 65°C

### Approvals

CE marked. UL, cUL listed.

### Meter with Relays Option

Panel cutout required:  
1.772" x 3.622" (45mm x 92mm)

### Special Features

- Universal input (TC, RTD, mA, V DC)
- Sunlight-readable display (adjustable intensity)
- Push-button or PC programmable
- Dual relay option for limit alarms or pump control (with alternation)
- Isolated 4-20mA output options (sink/source)
- Single/dual 24V DC isolated power options
- Modbus RTU communication option
- Data acquisition and logging capabilities with MeterView software
- Universal power supply 90-265 VAC/VDC
- Shallow depth package (3.6" behind panel)

### Easy Setup

The APM765 is very easy to set up and program using the simple four-button configuration interface. There is only one switch on the entire meter – no jumpers – and never any need to open the case. The meter is also programmable using a PC and the MeterView software. A copy function quickly clones setups from other units.

### Applications

- Process & temperature monitoring
- High & low alarms
- Latching or non-latching relays
- Pump alternation control
- Time delay & fail-safe relays
- Minimum & maximum readings

### Data Logging

Software provides a convenient way to collect data generated by the APM765's serial output. Users can select the logging time interval and the engineering units for display on the computer screen. Data is written to a file that can be imported into spreadsheets or other applications.

## DC Process and Temperature Inputs

The APM765 is factory calibrated to accept 4-20 mA,  $\pm 10$  VDC, Type J, K, T, E thermocouples and 100 ohm platinum RTDs. Process inputs can be scaled with or without applying an input for virtually any engineering units. Temperature inputs can be programmed to display in degrees Fahrenheit or Celsius and a type K thermocouple can display up to 2300°F.

## Current/Voltage Input

Setting up the meter to accept a current or voltage input is very easy. All setup steps are performed by pushbuttons or through software so there are no switches or jumpers to adjust.

### Transmitter Powered by External Supply

### Transmitters Powered by Internal Supply (Optional)

## Thermocouple/RTD Input

Setting up the APM765 to accept thermocouple or RTD input is simply a matter of setting a switch at the rear of the case and selecting the input type from the menu.

Meters accept J, K, T, or E type thermocouples as well as two, three, or four-wire 100 ohm platinum RTDs.

## Isolated 4-20mA Output

### Standard 4-20 mA Sinking Output (powered externally)

### Sourced 4-20 mA Output and Input Signal Powered by Panel Meter (using dual 24V supplies)

## Serial or Modbus Output

The APM765 can be used as a data acquisition device, with the added benefit of a digital display, by connecting an optional RS-232 or RS-422/485 serial communication adapter.

Acromag offers MeterView software for simple data acquisition and to program the meter.

## MeterView Software

MeterView software enables PC programming of the APM765 and sets up data logger operation.

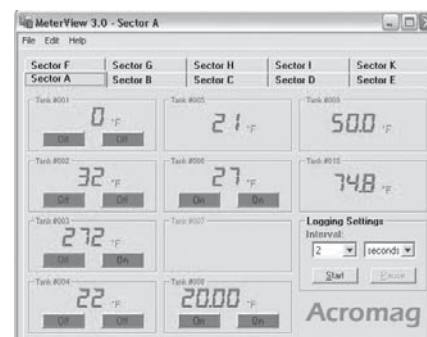

## Remote Programming

MeterView software allows all setup parameters to be programmed from a PC and saved to a file for reporting or programming other meters.

## Data Acquisition

MeterView software provides a convenient way to collect the data generated from the serial output of up to 100 panel meters. The user can select the logging time interval and the engineering units that will be displayed on the computer screen. Data is written to a file that could then be imported into a spreadsheet or other application.
